

# Cluey Data Collector & Tracking App

**Standardized yet customisable** to local circumstances and nature conservation issues

**Covering any subject**, ranging from wildlife sightings to illegal activities, threats, infrastructure, and more.

**No technical knowledge needed** to get started

# Cluey Data Collector & Tracking app

**Collect** field data with ease

- Record observations in a few clicks
- Mark critical Points of Interest
- Include photographic evidence

**Share** data with those you trust

Work both **online** (real-time) and  
**offline** (outside cell phone network cover)

# Core domains

Biodiversity monitoring

Human-wildlife conflict mitigation

Safety and security

Mapping (Infrastructure)

distant sighting

scratch marks

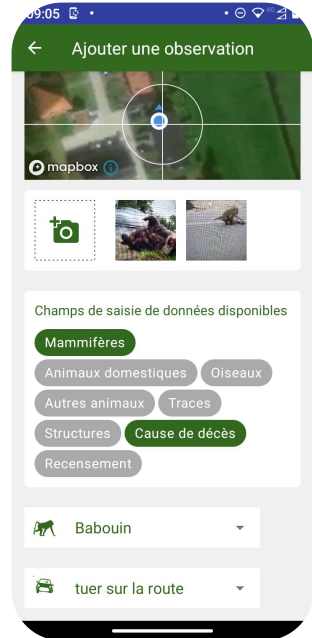

droppings

rub tree - hair

paw print

# Getting started

Download Cluey from **Google Play Store**  
(search for 'Sensing Clues Cluey')

Activate the app (free code: **100101**)

Les mots de passe doivent comporter entre 8 et 20 caractères et contenir au moins une lettre minuscule et majuscule et un caractère non alpha.

[Aller à la connexion](#)

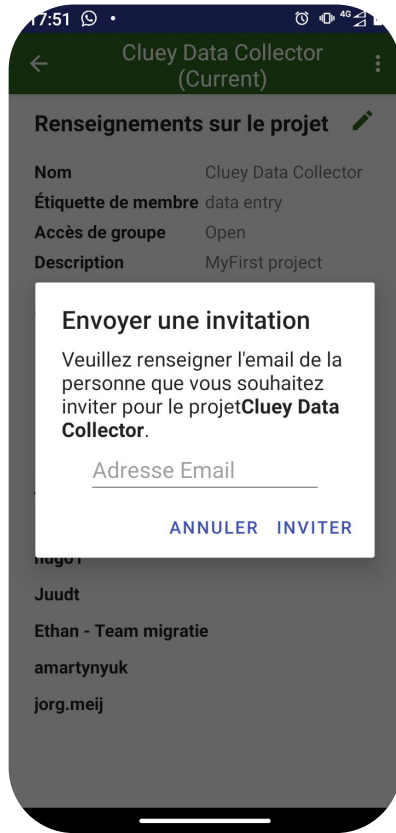

# Create your first Group

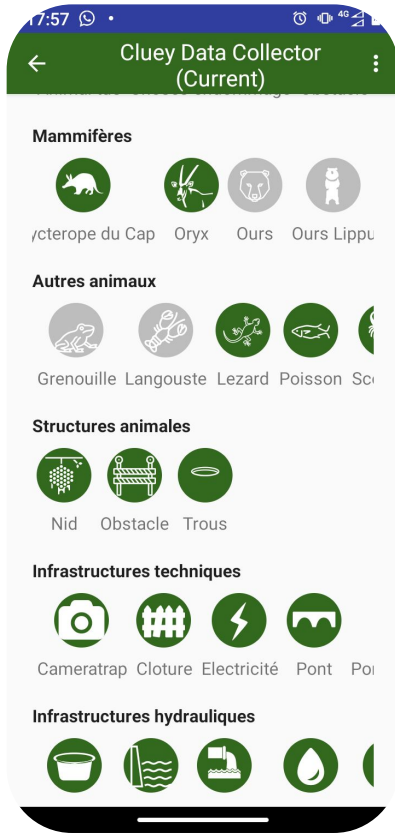

# Invite other Cluey users to your Group

- Get email address of your fellow-Cluey user
- Enter this email address in the field and press Invite

# Customize your Group

- Deselect the tags that you don't need
- These changes can be done at any time
- Only the Group owner can edit the tags
- Don't forget to save your changes

# Groups

## What is a Group?

- Similar to a Whatsapp group
- Used to collect and share information
- All information is shared with all members of the Group
- No one outside the Group has access
- The Group-owner can invite Friends
- Customise data entry fields

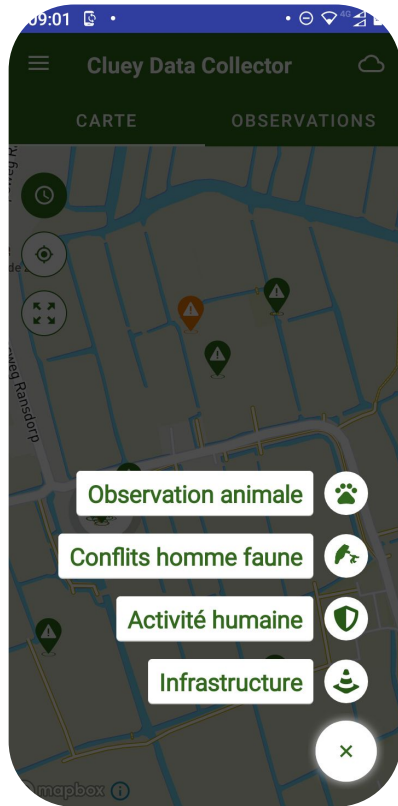

## Good practices

- Create as few Groups as possible
- Use short and self-explanatory names
- Consider sharing sensitive data in a separate Group

# Create your first observation

- By default your current location is used
- Long-press any location on the map to mark a distant sighting

# About Observations

Coordinates, date, time, Group and username are automatically recorded

Use tags where possible, add Description where needed

- The Sensing Clues Knowledge Model recognises many different concepts in the free text

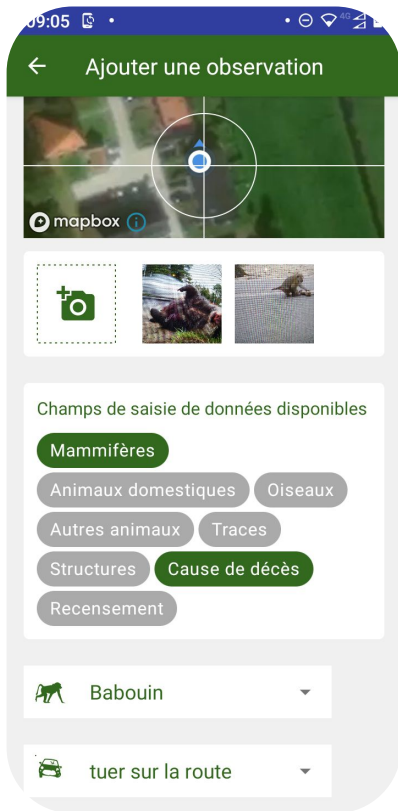

Include photos

- “1 picture is worth 1000 words”
- As proof or evidence
- For validation or correction by (senior) colleagues
- For retrospect identification
- For investigative purposes.  
E.g.: look for the same knots, materials, etc.

# Data entry field : Animal sighting

Champs de saisie de données disponibles

Mammifères

Animaux domestiques Oiseaux

Autres animaux Traces

Structures Cause de décès

Recensement

Babouin

tuer sur la route

If needed:

- Select the type of animal: mammal, domestic, bird, other
- In case of a carcass: add Cause of Death
- Use the Census-data entry field in case of surveys

# Collecting census data

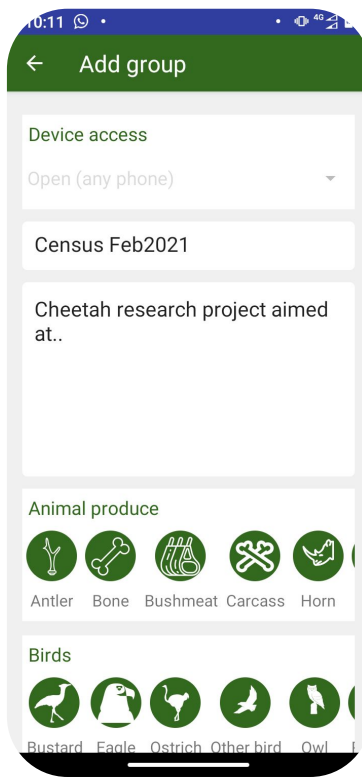

1. Create a dedicated **Group** and deselect tags you don't need

2. Select **Census transect** from the tracking options

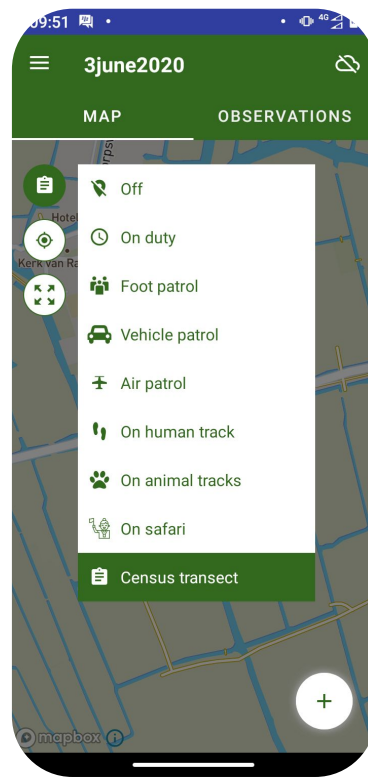

3. Select **Mammals** (or another category) and **Census** from the Available data entry fields

All Observations are connected to the related Census transect and can be studied in Focus, ArcGIS, Power BI, WildCAT, or downloaded for processing in any other tool.

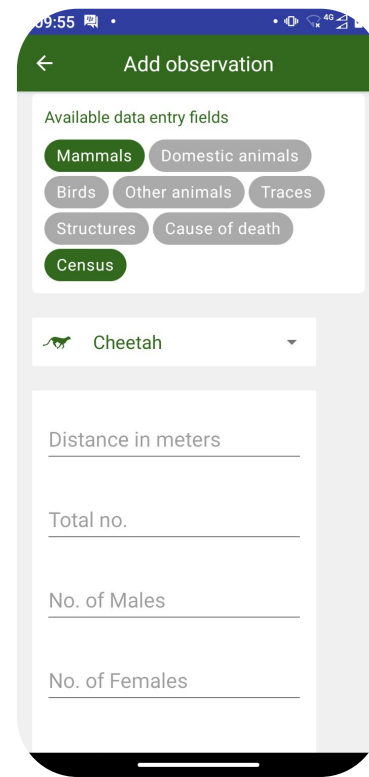

## 1. Create Group

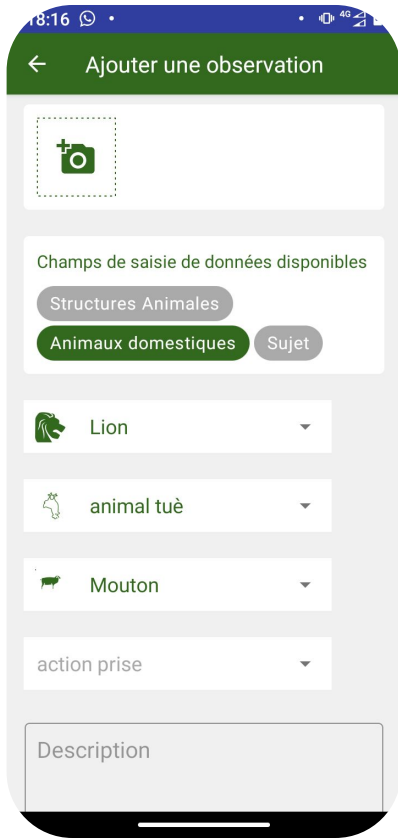

## 2. Tracking options

## 3. Data entry fields

Description

If needed, add

- Animal structures, such as nests
- The type of Domestic animal that was involved
- The details of the affected human

# Data entry field : Human activities (legal, illegal)

18:20

Ajouter une observation

mapbox

Champs de saisie de données disponibles

- Découvertes
- Moyen de Transport
- Produit faunique
- Produit de flore
- Armes
- Animaux domestiques
- Sujet

Activité humaine

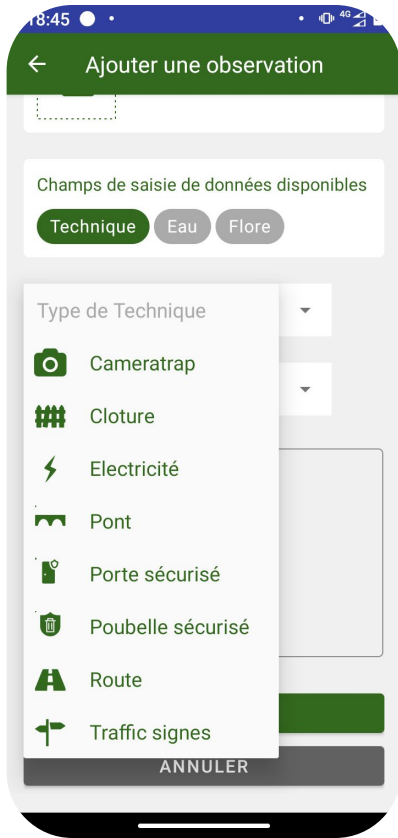

action prise

If needed, add

- Finds e.g foot prints, drums, spade, etc.
- Means of Transport e.g motorbike, handcart, car
- Animal Produce e.g meat, skin, bones
- Flora Produce e.g firewood, logs, fruit
- Weapons e.g snare, slingshot, knife, rifle
- Domestic animals
- Subject details

# Data entry field : Infrastructure

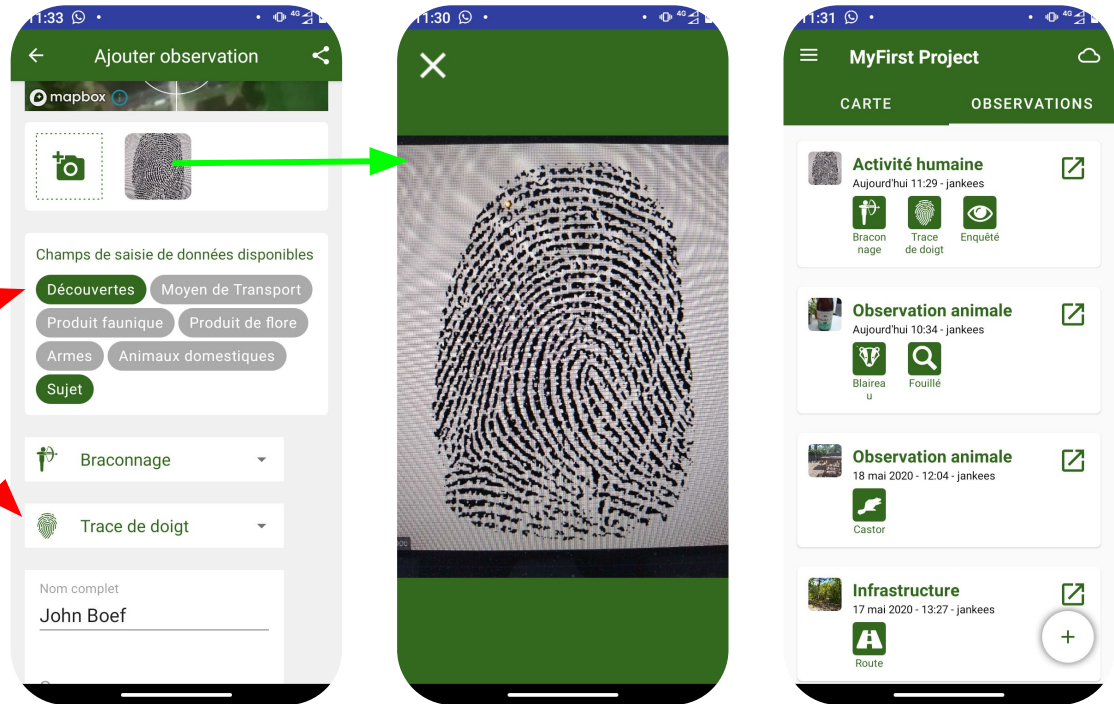

- Technical e.g. bridges, drains, cam-traps, etc.
- Water e.g. rivers, wells, channels
- Flora e.g. crop, herbs, fruit trees

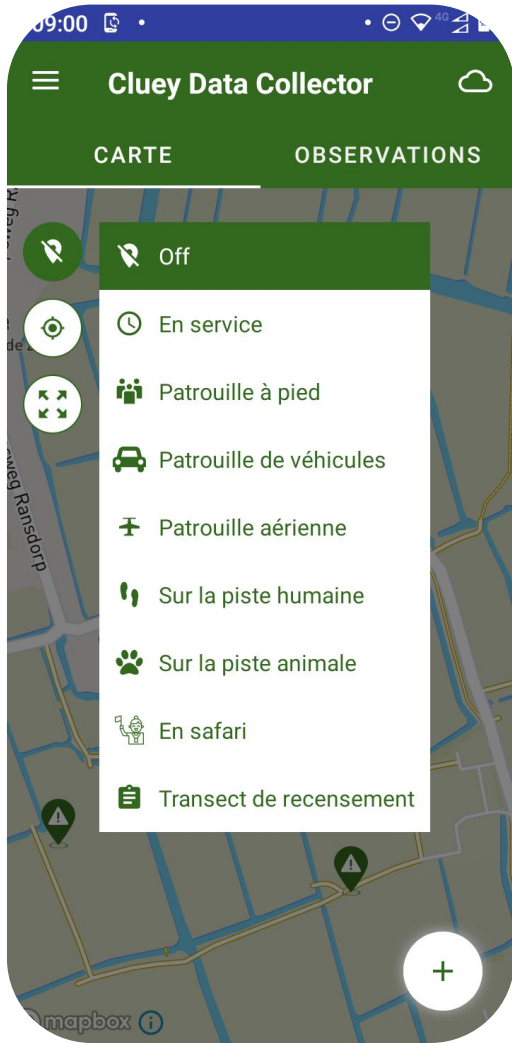

# Example: recording of a fingerprint

- 1) Take fingerprint on ink paper
- 2) Open Cluey and select Thing
- 3) Make photo of the fingerprint
- 4) Select Fingerprint within Finds data entry field
- 5) Add information like name and address.
- 6) Photo can be enlarged

# Tracking

Why tracking?

-  To allow others to find (and help) you
-  To create patrol density maps
-  To create risk maps

# Increase GPS accuracy

GPS accuracy is governed by Android. Two tips to improve accuracy:

1. Adjust the **Location-based services** settings of your Android phone:
  - Go to Settings / Location / Wi-Fi and Bluetooth scanning: turn both **OFF**
  - Go to Settings / Location / Advanced / Google Location Accuracy: turn **OFF**
2. Install the **GPS Connected** app:
  - Visit the Google Play Store to search and install the "**GPS Connected**" app
  - Open the app and make sure **LOCK GPS** is black (and UNLOCK GPS is grey)

# Remember before going into the field!

## Connected Mode

- to **log in**
- to create a new Group
- to **invite friends**
- to view observations of your friends
- to share your observations with friends

## Local Mode

- to work in areas without cell cover
- to **save battery** life
- to **save telecommunication costs**

# A few examples of observations

- You found **paw prints** of a **fox**
- You saw an **elephant** on the other side of the river
- You found **recent scratch marks** of a **bear**
- You found the **carcass** of **red deer**

- A farmer reported that a **wolf** has **killed** all his **chicken**

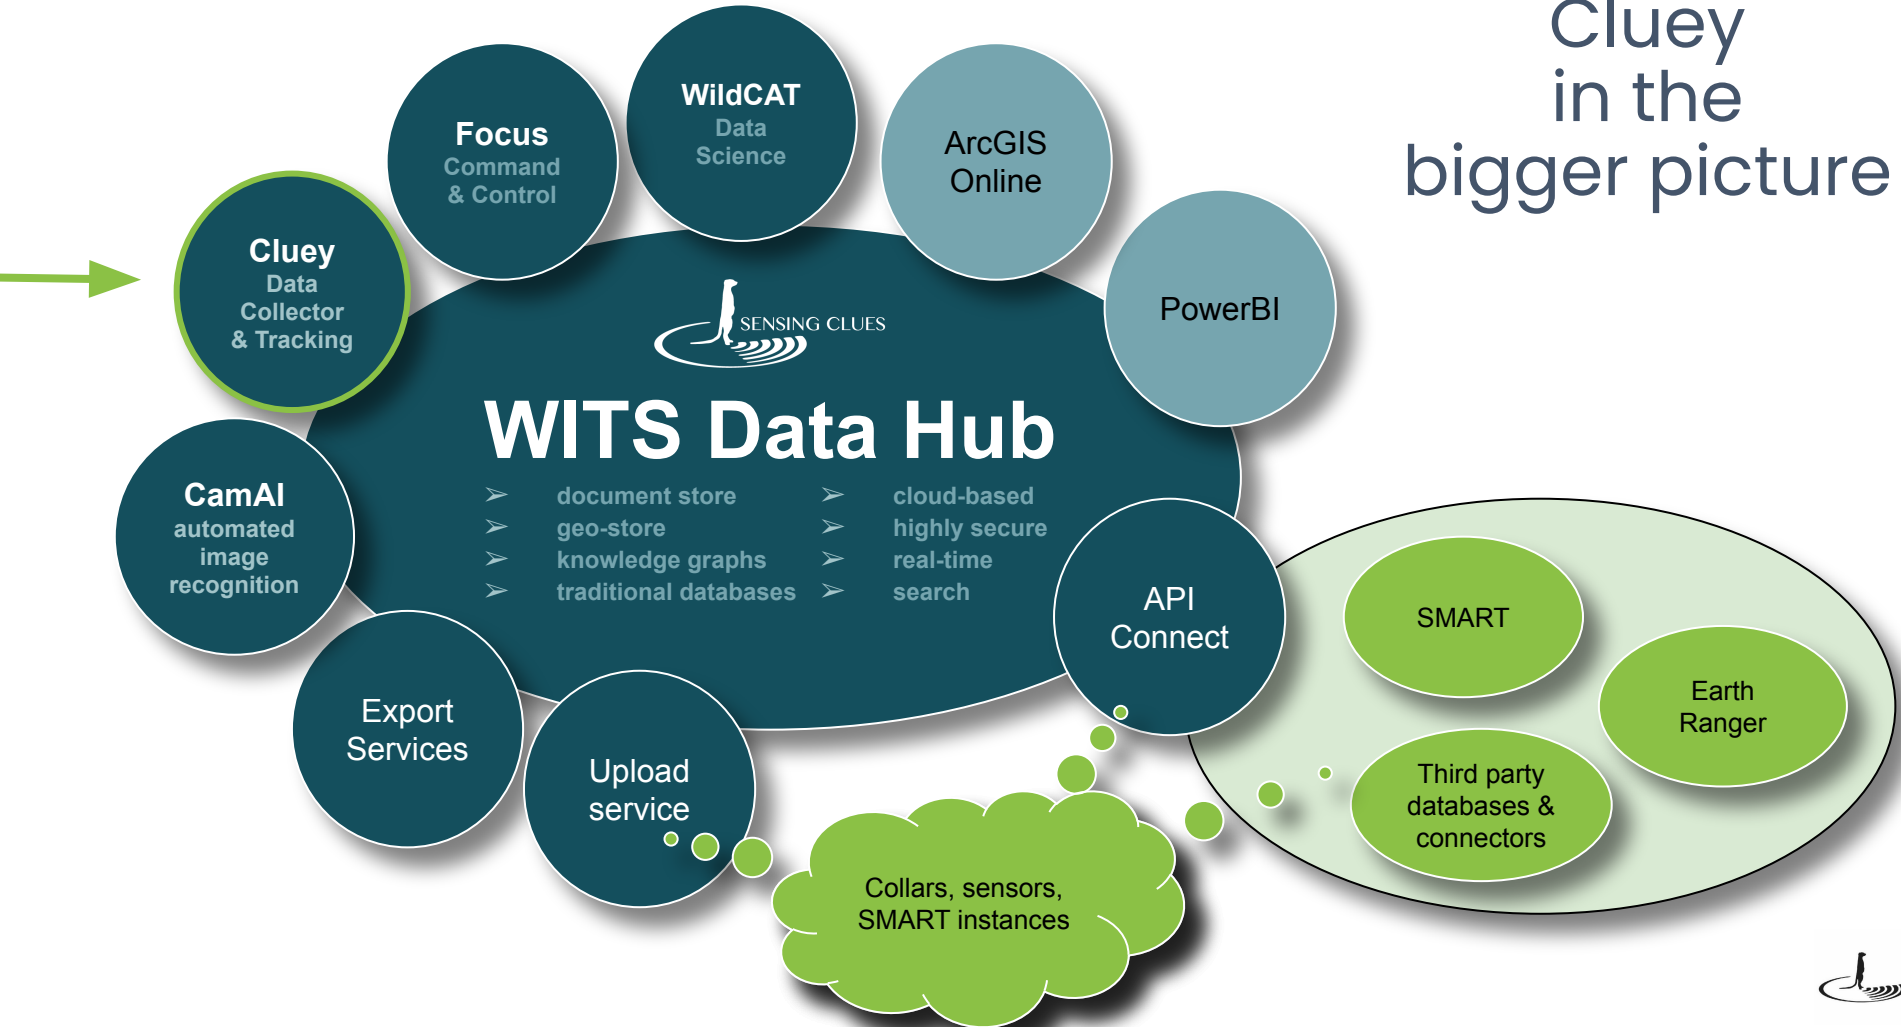

- You found and **inspected** a **snare**
- You found **tracks** of a **motorbike**, illegally passing through the reserve
- You **warned a person** for **trespassing**

- You **cleaned** a **drainage** pipe on the mountain road which you are inspecting
- You noted that the **water level** in the **lake** is **high**
- You **inspected** a **fence** and noted that it was **broken**

# CamAI (first release: Summer 2021)

## Why

- Increase value of collected cam-trap images
- Save hundreds of labour hours

## How

- Processing of camera-trap images
- Trained model to recognise animals
- Human-in-the loop to check quality
- Corrections used to retrain the model
- Results directly available for reporting and complex tasks, such as the creation of
  - Habitat suitability models
  - Population density estimation models
  - etc.

# Why Sensing Clues?

- **Turn-key: get started within a day!**
- Most innovative, lean and mean, and user-friendly tool suite available
- Cutting edge technology: semantic multi-model datahub
- Real-time information by default, offline when needed
- Easy aggregation of data from multiple data collection groups and conservation areas
- Lowest possible total-cost-of-ownership (TCO)
  - Free software, hosting, and storage
  - No technical expertise needed to integrate data from different sources
  - Zero-learning-curve
- No vendor-lock-in: all data is accessible via API's and CSV-exports
- Secure by-design
- Help at arms-length from our multidisciplinary team via Whatsapp, Signal, email, or helpdesk
